U IT Capture Interfaces

Key aspects

The U IT Capture tools will help you to ...

... save of your time for better purposes

Indeed, we focused in priority on how to reduce as much as possible the time spent on the reports generation. Please read the following pages to learn more about all the practical aspects we implemented or took into consideration to achieve this goal

Table of contents

UIT

U IT took care to …

- Provide professional and complete tools
- Propose efficient, intuitive and user friendly interfaces
- Add the maximum possible of extra controls, capture rules and "quality filters"
- Allow fast and easy filling with copy/paste
- Add a contextual help
- Allow easy duplication of the tools for the fiduciaries or the great groups with many accounts
- Implement unique functions and options
- Avoid complex installation procedures and the need of user right/access management
- Allow more flexibility by creating independent tools to separate the capture task operation from the sending one

1.

The use of Excel

Our tools benefit of the advantages of Excel :

- ✓ Who don't use or know it ? Users usually like this application
- ✓ Copy then paste : your report is filled
- ✓ If you report for many entities, make a copy of the tools for each ones then open and edit the dedicated copies for each specific entity from month to month
- ✓ You can also save a copy of the macros from month to month if you need to keep a backup of the filled table
- ✓ You can rename the macros filename to include , for instance, the reported company name

UIT

How to organize ?

Create as many directories than
entities you report for
(do not forget the backup directory)
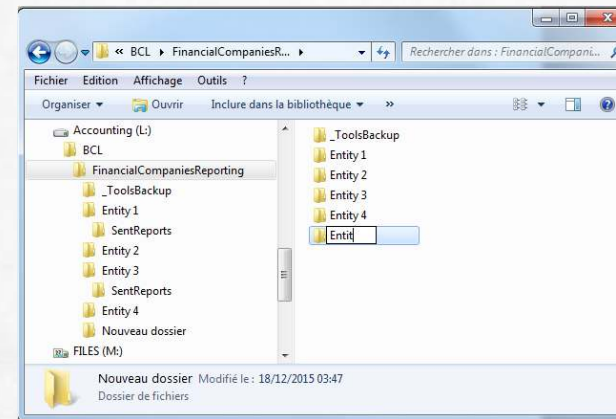

Make a copy of the tools in each
directories for each entities
Rename the macro to include entity's
name
You can also create a sub-directory to
keep an history of sent reports

U IT

Add visibility

You can edit the big top cell at the top of each tools and write the reported company's name

This small option can be helpful if you manage multiple entities

Copy / Paste

If your IT department can extract all the numbers in a simple text file or even an excel one, you can fill one full report with a simple copy / paste operation (*)

This can be useful and time saving if you report for many entities.

* For the TPT-Type reports tools, we implemented a dedicated "Paste" button

2.

Extra controls

We implemented all the controls and verification as required by the regulator(s), but we also added :

- ✓ Additional financial rules and inter-fields dependencies
- ✓ Supplementary capture masks and rules for many specific fields
- ✓ Dynamic and contextual fields and list box
- ✓ Auto-sum amounts for direct verifications
- ✓ Quality filters rules (non blocking) with user's warning
- ✓ Verification of duplicate rows

More controls at the capture step will prevent to send bad or incomplete reports to the regulator and then avoid time-consuming dialogue with them, corrections, re-generation and re-sending

UIT

3.

Unique functions/options

The tools also benefit of the following :

- ✓ Cross-check function to verify the monthly TPT numbers with the quarterly report
- ✓ Allow 2 capture methods for TPT-type reports (via dedicated windows or directly on the excel table)
- ✓ For large screen, all the table can be displayed (TPT-Type)
- ✓ Can specify a default target directory to generate the reports (for all the copies of all the macros)
- ✓ Remove from 1 to X rows in 2 click
- ✓ Function to rapidly duplicate a row (TPT-type)
- ✓ Auto change the date to the next report
- ✓ Change language from English to French in one click

UIT

5.

About the license model

We verify with you, once a year, in January, the list of entities you report for

Based on this list we send you an invoice for the full year, and later on, a copy of the tools, under your license name, for the concerned year

If you have to report for new entities during the on-going year, it's fine for us, we won't charge it

6.

And the support ?
